- Zebra Printer ZQ521

3. What's New

Improvements

Improved Stock Visibility

In the Kitting module, low stock items are now clearly marked, especially when the available stock is lower than the required quantity. This helps users quickly identify low-stock items, enabling faster decision-making and preventing delays.

This feature supports the **iOS** platform.

Improved Labeling in Kitting Module

The field previously labeled "Staging Area" in the Kitting module has been renamed to "Kitting Storage Location" to reflect its purpose better, improving clarity and alignment with business processes.

This feature supports the **iOS** platform.

Enhanced Inventory Management

In the Inventory Management and Stock Overview modules,

- Users can search the material stock based on the search parameters and by the old material number, but not with invalid material details.
- The stock situation shown in the app matches the stock situation in SAP.

This improves inventory management by providing accurate data.

This feature supports the **ABAP** platform.
